Installation Emulator For DAF Euro 6

DAF EURO 6 ADBLUE CANCEL EMULATOR INSTALLATION

You must attach the emulator to the rear of the silencer under the EAS ECU.

You must first disconnect the NOx sensor cables and connect the emulator cables to the NOx cables.

You must obtain fuse F22 (e497, 15A)

CAN cables are located at the top of the NOx socket.

Car side	Emulator side
CAN H ----->	YELLOW cable
CAN L ----->	GREEN cable
POWER (+) ----->	RED cable
GND (-) ----->	BLACK cable

EMULATOR VIN PROGRAMMING STEPS:

After the emulator is installed, do not pull the fuses, turn on the ignition.

After waiting one minute, turn off the ignition and pull the fuses.

Delete error.

Daf vehicles have two types of fuse plates, which are illustrated below. Which type of vehicle If there is a fuse tray, follow the instructions.

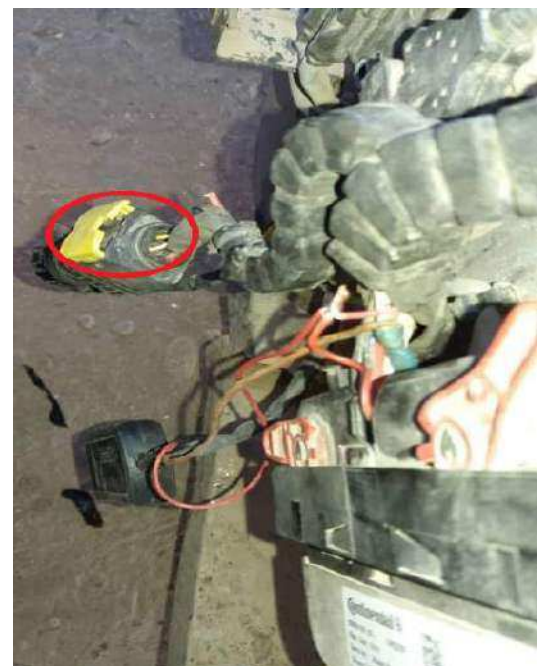

1. Tray type: you must get fuse F22 (e497, 15A)
2. Tray type: You should take fuses D25 and D26 (10A and 15A).

IMPORTANT NOTE: Only the CAN cables are to be connected from the NOx socket as the truck's fuse has been taken. For power connections you need to use ground (GND) and contact (+).

You must clear the error codes from the engine ECU. If you do not have DAVIE software, you can use **DAF Euro 6 DTC Eraser**.

The connection type DAF460 / 480 is the same but the NOx socket locations are different. The following are shown.

DAF460

Installation Emulator For DAF Euro 6

DAF480

1.Tab type fuse
